

Install and manage your device with Inseego Mobile™

Put an end to some of the most time-consuming tasks

Gone are the days when rolling out and professionally installing your network devices used to be a hassle. It used to require costly truck rolls for installation and troubleshooting, time and effort to figure out the right location for each device for the best signal reception, and the headache of managing all of your devices. Now you and your team can rely on Inseego Mobile App to handle all of these tasks for you, while you can access and control all the functions from any location.

Inseego Mobile is a powerful application that offers you full control

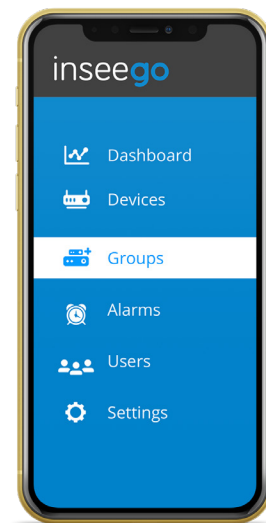

Inseego Mobile App enables simple self-installation of Inseego indoor Fixed Wireless (FWA) devices. It automatically pairs with your mobile device and guides you through the installation process step-by-step. This reduces the need to dispatch technicians and lowers your OPEX.

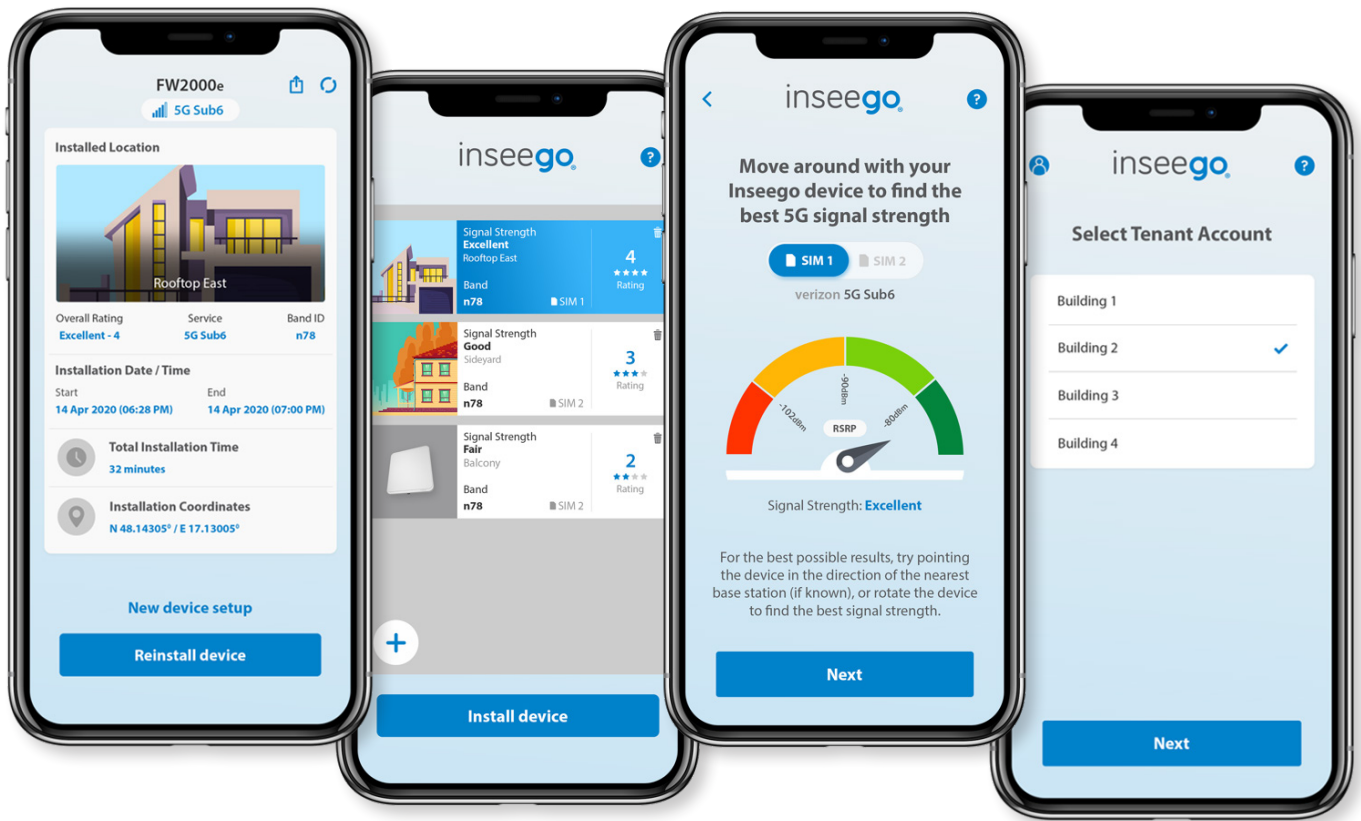

For outdoor FWA devices, the Inseego Mobile App provides an optimized flow for professional installers, reducing time to install and eliminating work order paperwork. A digital installation record captures the installation date, time, location and performance for each installed device.

Inseego Mobile App ensures that devices will be installed in the best location, enabling the best possible service by automatically analyzing signal strength and calculating end-user throughput without running a separate speed test.

Inseego Mobile App provides a seamless interface to Inseego Connect Cloud for remote device health and performance monitoring.

With advanced cloud analytics, it can identify problems before they become customer issues and eliminate costly truck rolls.

Benefits of Inseego Mobile™

- QR code – configures the app for each Inseego device and ensures customized screen flows, saves time and hassle
- Measure signal strength on 2 different network SIMS and check the performance differences on each
- View device, network and installation statistics on each network SIM
- Access device diagnostics including inventory data, network data, hardware data and data usage by device and WiFi clients
- Access & manage settings for unlimited number of devices in different offices or locations with simple sorting and search functions
- Configure devices with SSIDs & passwords, setup custom APNs, block unwanted connected devices, setup port forwarding & IP filtering, and much more!
- Manage WAN settings with Dual SIM management functionality and different Sets up alerts to avoid data usage overages, when new devices connect or when WAN connection is lost or performance drops

Learn more about how you can use Inseego Mobile™ app to simplify installation and cost efficiently manage your devices.

Available for iOS and Android
